June 26, 1944

COTTON AND FIBER BRANCH MEMORANDUM NO. C-5 (REVISED)

Quality Data for United States Reports

1. Each Area Office will submit to the Statistical and Quality Improvement Division of the Branch, by telegram on the day preceding the release of figures on ginnings by the Bureau of the Census (see dates in Branch Memorandum C-8) the following data:

- (a) The number of samples of each grade and staple length classed for statistical purposes for the preceding ginning period for upland, American-Egyptian, and sea island cotton.
- (b) Number of samples untenderable.
- (c) Number of samples reduced in grade on account of rough preparation.

These data will be reported by states and the first report should not be submitted until requested by the Branch.

2. The following code words will be used in transmitting quality data by telegraph:

Reports on Forms FDA-690 and FDA-691

3. Reports showing samples used for statistical purposes will be submitted by each Area Manager to the Statistical and Quality Improvement Division of the Branch for: (a) Upland cotton on Form FDA-690. (b) American-Egyptian and sea island on Form FDA-691. A separate report will be submitted for each district (or State where districts are not used) and for each ginning period, regardless of the number of samples classed. These reports are not to be submitted until late samples have been classed and tabulated but the report must be mailed not later than 3 weeks after the close-out date for the period represented. These reports should be carefully checked. Be sure that the sum of samples for the lengths 1-1/8 inches and longer equals the number of samples reported for preparation of these lengths.

Late Samples

4. All late samples received after the close-out date for the ginning period represented will be classed and included in cumulative semi-monthly reports during the current season for districts and States. All late samples received after reports on FDA-690 and FDA-691 have been mailed will be classed and tabulated by districts, States, and ginning periods, and enclosed with the regular reports for March 20. Samples received after the reports for March 20 have been made will be classed, tabulated, and reported upon request.
